DECISION TREE ON PAPER:

A decision tree is a model that makes decisions based on conditions. In this example, we use weather conditions like rain, temperature, and wind to decide whether to play outside. Each branch represents a decision, and the final result gives the output.

1️⃣ Start with a question (root)

Is it raining?

2️⃣ Draw two branches

- YES → Go right
- NO → Go left

3️⃣ Continue decisions

👉 If **YES (raining)**:

Is it windy?
YES → Don't Play ❌
NO → Play ✅

👉 If **NO (not raining)**:

Is temperature high?
YES → Don't Play ❌
NO → Play ✅

🌳 Final Tree (Write like this)

```
        Is it raining?
          /     \
       No        Yes
        /         \
Is temp high?   Is it windy?
```

/ \ / \

Yes No Yes No

❌ ✅ ❌ ✅

Don't Play Don't Play

Play Play
